# INTRODUCING MONITOR SERIES 7 SUBWOOFERS:

Monitor SUB 8, Monitor SUB 10  
& Monitor SUB 12

■ Is it really necessary to have a sub the size of a side-by-side refrigerator to achieve spectacular bass. NO! Is it cool? Oh hell yea! Can you get really great bass from a really small cabinet? Absolutely! The new Paradigm's Monitor Series of subwoofers really are something special. The little SUB 8 is amazing. No, it won't make the curtains flap from the output, but it will make you question just how big a sub is really necessary to achieve outstanding results. Unless you really like huge subs and really like being shirtless & single!

Paradigm has three subwoofers to complement its Monitor series speakers: the Monitor SUB 8, SUB 10 and SUB 12. There are several features that have trickled down from Paradigm's Signature and Studio series subs. The subs are all outfitted with an "Ultra-Class D" amplifier rated to produce 300 watts RMS/900 watts peak. Consider that the SUB 8 will deliver 19Hz, down *only* 3dB in room response. That is amazing performance! Couple this with the optional wireless transmitter and super-handly "Perfect Bass Kit" equalization system, and you've got a subwoofer that is tight, clean and extended from a cabinet smaller than a bread maker! With so much trickle-down technology, you might be wondering how much is this going to cost me? Pricing for the SUB 8, SUB 10 and SUB 12 is \$699, \$849 and \$999 respectively. When shopping for subs, think before you buy the biggest subwoofer known to man!
